

Phone Holder with Wireless Charger Installation Instructions

WARNING! Charging efficiency will be reduced or absent if there is any metal part or a cover with a thickness of more than 4 mm between the charging mount and your smartphone.

Magnetic mount

1) Please, glue a metal plate supplied either under the cover of your smartphone or under its case or over the back cover.

WARNING! Before gluing the plate, please, find an area on the back of your smartphone where the charge will be more efficient by adjusting your phone to the mount; and then you may fix the metal plate.

2) Mount the magnetic holder on the air vent of your vehicle if it is possible. Otherwise, you may find another suitable place with a flat surface and affix your holder using adhesive tape.

3) Attach your smartphone against the holder and it will lock into place due to an attractive force between the magnet and the steel plate

4) Plug one tip of the USB connection cable into the port in the holder and another one into the USB socket in your car. The charge will start automatically.

Cradle:

1) Mount the holder on the air vent of your vehicle if it is possible. Otherwise, you may find another suitable place with a flat surface and affix your holder using adhesive tape.

3) Please, adjust and secure your smartphone in the holder so that the wireless charging areas of the mount and on your smartphone match.

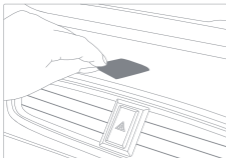

WARNING! Please, slide the bottom part of the holder to the desired distance to ensure your smartphone is charging well in models with manual height adjustment.

4) Plug one tip of the USB connection cable into the port in the holder and another one into the USB socket in your car. The charge will start automatically.
